Simply rotate your device

The trick is to listen to your instinct, grab the opportunity when it presents itself and then give it your all. You *will* stumble and fall, you will

The trick is to listen to your instinct, grab the opportunity when it presents itself

Edit your scripts

Control the **speed** of scrolling

Use the play/pause button to practice, or to pause scrolling during recording

Open the **settings** menu to configure it to your needs

A quick guide to the settings menu

1. Change the size of the script font.

2. Mirror the script (for use in a professional teleprompter device)

3. Text area is easier to read when large but keeping it small ensures your eyes move less when reading.

4. Change the transparency of the text area to make it easier to see the script or video image.

5. Add a countdown before recording to get into position.

6. Change the background colour of the text area

7. Change the position of the text area to be next to the camera or on the opposite side.

8. Add a countdown after recording to automatically stop recording. '-' means you need to press stop yourself!

9. Show a timer in the corner of the screen so you know how long you've been recording.

10. Add a helpful grid on the screen to compose the perfect video using the 'rule of thirds'.

11. Lock the Auto-Exposure (AE) to get the perfect lighting.

12. Choose between the Front and Back facing cameras
